

Press Release**Zumtobel part of the game at the new DFB museum**

Under the motto "We are football", the German Football Association (DFB) has created a museum that offers its visitors an innovative, multimedial and contextually sophisticated experience. A lighting solution from Zumtobel, the LUXMATE LITENET lighting management system, is a key player that will meet the scenographic and emotional expectations.

Dornbirn, June 2016 – The 2016 European Championship currently has a firm grip on Europe and the German national team are well on the way to writing another chapter of football history. Since October 2015, the German Football Museum in Dortmund has been the home of unforgettable footballing moments in Germany. The exhibition is spread over 3,300 m² and impresses with a modern concept that offers visitors a high-quality experience with interactive and multimedial content. With an exciting sequence of rooms and variety of materialisation, the diverse dramaturgy naturally demands the right lighting concept that on the one hand highlights certain elements, e.g. to accentuate the national team's gleaming trophies, and on the other hand guides people specifically through the rooms. Moreover, light also plays an important emotional role, not just when informing different generations and inspiring reflection, but to surprise, touch and inspire them and, last but not least, to entertain them.

With this in mind, Zumtobel convinced the contractors, architects and planners with their competence in the area of lighting control and was awarded the contract for a large part of the museum's interior lighting. The key lighting solution is the flexible lighting management system [LUXMATE LITENET](#), which enables the luminaires' luminous intensity and colour temperature to be independently defined and adjusted – the right lighting scenario can be configured for the respective area of application. Moreover, it provides integration with the emergency escape lighting using the emergency lighting system [ONLITE](#), which is used throughout the entire building. General lighting is taken care of thanks to the [TECTON](#) continuous-row luminaire, [PANOS](#) downlights and Cardan E1 gimbal-mounted luminaire modules, conciliating efficient lighting with great light quality and ideal colour rendering. In staircases and passages, the aesthetic Sottile light line, a project luminaire based on the [SLOTLIGHT infinity slim](#), emphasises subtle accents and ensures an excellent atmosphere in the room in which visitors feel at ease.
